IEP (Individualized Education Plan) is a comprehensive plan that outlines the specific educational needs, goals, and services required for a student with disabilities. It is developed by a team consisting of the student, parents, educators, and other professionals. The IEP is reviewed and updated annually to ensure continuity of services and progress monitoring. The IEP must be developed in consultation with the student and their parents, and it should be based on the student's unique needs and strengths. The IEP includes annual goals, short-term objectives, related services, and other support services necessary for the student's education. It also requires evaluation of the student's progress and continuous assessment to adjust the plan as necessary.
